The Kansu China earthquake of 1920 was measured about 8.5 on Richter Scale and the Tokyo, Japan earthquake of 1923 was measured 7.8 that Scale how many times stronger was the 1920 earthquake 1923 earthquakes?

Sol:-

I_1 be the Intensity of china's earthquake

I_2 be the Intensity of japan's earthquake

As we know = $m = \log \frac{I_e}{I_0}$

China's

Japan

$$M = \log \frac{I}{I_0}$$

$$M = \log \frac{I}{I_0}$$

$$8.5 = \log \frac{I_1}{I_0}$$

$$7.8 = \log \frac{I_2}{I_0}$$

Samsung Galaxy A14

July 10, 2024

→ i)

$$7.8 = \log I_2 - \log I_0$$

→ ii)

$$eg\ i - eg\ ii$$

$$8.5 = \log I_1 - \log I_0$$

$$+ 7.8 = -\log I_2 - \log I_0$$

$$0.7 = \log I_1 - \log I_2$$

$$0.7 = \log \frac{I_1}{I_2}$$

taking antilog on b/s

$$\text{Antilog } 0.7 = \text{antilog} \left(\log \frac{I_1}{I_2} \right)$$

$$5.012 = \frac{I_1}{I_2}$$

or

$$\frac{I_1}{I_2} = 5$$

$$\therefore 5.012 = 5$$
